

CONSTANT SPEED ROTATOR MODELS ER-12A & ER-12B

This convenient fixed-speed rotator is an economical unit that runs at an approximate speed of 3,000 RPM at full load. Stand the enclosure on the end with the bumpers so that the shaft is horizontal. The chuck is specifically designed to securely mount the Stroboscope Discs (RA-21) with a washer on either side, but may also be useful in spinning a variety of similar items such as a color disc or a siren disc. The simple chuck has a threaded section with a large knurled nut for hand tightening. Be sure that the thumb nut is securely tightened. There is a step at the base of the threaded section of the correct size to properly seat the strobe discs with the help of the knurled nut and a washer. This unit is also available for operation at 220 volts 50 Hertz (ER-12B) with a slight reduction in the maximum speed.
